

## Assignment 8

Tala El Zein

**Question 1:** Using the diagrams given in the presentation calculate how much (%) is the effect of applying different modifications (changing the gas, adding an extra pane, using a low emissivity coating) on the U value with respect to a benchmark case of double layer with air and no coating ? (keep the gap thickness to be 13 mm)

$\epsilon$ value	0.84			0.1			0.84			0.1		
number of panes	2	2	2	2	2	2	3	3	3	3	3	3
Gas	air	argon	krypton	air	argon	krypton	air	argon	krypton	air	argon	krypton
U-value	2.8	2.65	2.6	1.8	1.5	1.4	1.8	1.7	1.6	1	0.8	0.7
% of change		5.63	7.14	35.71	46.42	50	35.71	39.28	42.85	64.28	71.42	75

## Question 2

Consider the house that we analyzed in the last two examples, calculate the heating and cooling load of the other windows which are fixed 14.4 m<sup>2</sup> on the west, fixed 3.6 m<sup>2</sup> on the south and an operable 3.6 m<sup>2</sup> on the south (the same window and frame type). How much does the total value change if I change the frame of the window from wooden one to aluminum?

**Location:** Piacenza; **Latitude:** 44.92 N; **Longitudinal:** 9.73 E; **Elevation:** 138

T (heat)= 24°C; T (cool)= 20°C

Therefore,  $\Delta T_{\text{heating}} = 20 - (-4.8) = 24.8^\circ\text{C}$   $\Delta T_{\text{cooling}} = 31.9 - 24 = 7.9^\circ\text{C}$

DR= 11.9°C (from table)

Calculating load of **fixed Wooden** window on the **WEST= 14.4 m2:**

a) Cooling

$$CF_{\text{ht}} = U(\Delta T_{\text{cooling}} - 0.46 \cdot DR) = 2.84 (7.9 - 0.46 \cdot 11.9) = 6.9 \text{ W/m}^2$$

$$CF_{\text{ip}} = \text{PXI} \cdot \text{SHGC} \cdot \text{IAC} \cdot \text{FF}_s = 747 \cdot 0.54 \cdot 1 \cdot 0.56 = 217.8 \text{ W/m}^2$$

$$CF (\text{total}) = 224.7 \text{ W/m}^2$$

$$\mathbf{Q (\text{cooling}) = CF(\text{total}) \cdot A = 224.7 \cdot 14.4 = 3235.7 \text{ W}}$$

b) Heating

$$HF = U \cdot \Delta T_{\text{heating}} = 2.84 \cdot 24.8 = 70.4 \text{ W/m}^2$$

$$\mathbf{Q (\text{heating}) = HF \cdot A = 70.4 \cdot 14.4 = 1013.8 \text{ W}}$$

Calculating load of **fixed Aluminum** window on the **WEST= 14.4 m2:**

a) Cooling

$$CF_{\text{ht}} = U(\Delta T_{\text{cooling}} - 0.46 \cdot DR) = 3.61 (7.9 - 0.46 \cdot 11.9) = 8.8 \text{ W/m}^2$$

$$CF_{\text{ip}} = \text{PXI} \cdot \text{SHGC} \cdot \text{IAC} \cdot \text{FF}_s = 747 \cdot 0.56 \cdot 1 \cdot 0.56 = 234.3 \text{ W/m}^2$$

$$CF (\text{total}) = 243.1 \text{ W/m}^2$$

$$\mathbf{Q (\text{cooling}) = CF(\text{total}) \cdot A = 243.1 \cdot 14.4 = 3500.64 \text{ W}}$$

b) Heating

$$HF = U \cdot \Delta T_{\text{heating}} = 3.61 \cdot 24.8 = 89.5 \text{ W/m}^2$$

$$\mathbf{Q (\text{heating}) = HF \cdot A = 89.5 \cdot 14.4 = 1288.8 \text{ W}}$$

Calculating load of **fixed Wooden** window on the **SOUTH= 3.6 m2:**

a) Cooling

$$CF_{ht} = U (\Delta T_{cooling} - 0.46 * DR) = 2.84 (7.9 - 0.46 * 11.9) = 6.9 \text{ W/m}^2$$

$$CF_{ip} = PXI * SHGC * IAC * FF_s = 557 * 0.54 * 1 * 0.47 = 141.4 \text{ W/m}^2$$

$$CF \text{ (total)} = 148.3 \text{ W/m}^2$$

$$Q \text{ (cooling)} = CF \text{ (total)} * A = 148.3 * 3.6 = 533.9 \text{ W}$$

b) Heating

$$HF = U * \Delta T_{heating} = 2.84 * 24.8 = 70.4 \text{ W/m}^2$$

$$Q \text{ (heating)} = HF * A = 70.4 * 3.6 = 253.4 \text{ W}$$

Calculating load of **fixed Aluminum** window on the **SOUTH= 3.6 m2:**

a) Cooling

$$CF_{ht} = U (\Delta T_{cooling} - 0.46 * DR) = 3.61 (7.9 - 0.46 * 11.9) = 8.8 \text{ W/m}^2$$

$$CF_{ip} = PXI * SHGC * IAC * FF_s = 557 * 0.56 * 1 * 0.47 = 146.6 \text{ W/m}^2$$

$$CF \text{ (total)} = 155.4 \text{ W/m}^2$$

$$Q \text{ (cooling)} = CF \text{ (total)} * A = 155.4 * 3.6 = 559.4 \text{ W}$$

b) Heating

$$HF = U * \Delta T_{heating} = 3.61 * 24.8 = 89.5 \text{ W/m}^2$$

$$Q \text{ (heating)} = HF * A = 89.5 * 3.6 = 322.2 \text{ W}$$

Calculating load of **operable Wooden** window on the **SOUTH= 3.6 m2:**

a) Cooling

$$CF_{ht} = U (\Delta T_{cooling} - 0.46 * DR) = 2.87 (7.9 - 0.46 * 11.9) = 6.96 \text{ W/m}^2$$

$$CF_{ip} = PXI * SHGC * IAC * FF_s = 557 * 0.46 * 1 * 0.47 = 120.4 \text{ W/m}^2$$

$$CF \text{ (total)} = 127.4 \text{ W/m}^2$$

$$Q \text{ (cooling)} = CF \text{ (total)} * A = 127.4 * 3.6 = 458.6 \text{ W}$$

b) Heating

$$HF = U \cdot \Delta T_{\text{heating}} = 2.87 \cdot 24.8 = 71.2 \text{ W/m}^2$$

$$Q (\text{heating}) = HF \cdot A = 71.2 \cdot 3.6 = 256.3 \text{ W}$$

Calculating load of operable Aluminum window on the SOUTH= 3.6 m2:

a) Cooling

$$CF_{\text{ht}} = U (\Delta T_{\text{cooling}} - 0.46 \cdot DR) = 4.62 (7.9 - 0.46 \cdot 11.9) = 11.2 \text{ W/m}^2$$

$$CF_{\text{ip}} = PXI \cdot SHGC \cdot IAC \cdot FF_s = 557 \cdot 0.55 \cdot 1 \cdot 0.47 = 143.98 \text{ W/m}^2$$

$$CF (\text{total}) = 155.2 \text{ W/m}^2$$

$$Q (\text{cooling}) = CF(\text{total}) \cdot A = 155.2 \cdot 3.6 = 558.7 \text{ W}$$

b) Heating

$$HF = U \cdot \Delta T_{\text{heating}} = 4.62 \cdot 24.8 = 114.6 \text{ W/m}^2$$

$$Q (\text{heating}) = HF \cdot A = 114.6 \cdot 3.6 = 412.6 \text{ W}$$
