

## TASK 1

Using the diagrams given in the presentation calculate how much (%) is the effect of applying different modifications (changing the gas, adding an extra pane, using a low emissivity coating) on the U value with respect to a benchmark case of double layer with air and no coating? (Keep the gap thickness to be 13 mm)

## ANSWER

| Panel with air gap 13mm   | U-value (W/m²K) | Reduction Effect (%) |
|---|-----------------|----------------------|
| Double-pane glazing, air in between, no coating                 | 2.80            | 0%                   |
| Double-pane glazing, argon gas in between, no coating           | 2.65            | 5%                   |
| Double-pane glazing, krypton gas in between, no coating         | 2.60            | 7%                   |
| Double-pane glazing, air in between, coating on 1 panel         | 1.80            | 36%                  |
| Double-pane glazing, argon gas in between, coating on 1 panel   | 1.55            | 45%                  |
| Double-pane glazing, krypton gas in between, coating on 1 panel | 1.40            | 50%                  |
| Triple-pane glazing, air in between, no coating                 | 1.80            | 36%                  |
| Triple-pane glazing, argon gas in between, no coating           | 1.65            | 41%                  |
| Triple-pane glazing, krypton gas in between, no coating         | 1.55            | 45%                  |
| Triple-pane glazing, air in between, coating on 1 panel         | 1.00            | 64%                  |
| Triple-pane glazing, argon gas in between, coating on 1 panel   | 0.80            | 71%                  |
| Triple-pane glazing, krypton gas in between, coating on 1 panel | 0.70            | 75%                  |

## TASK 2

A fixed heat absorbing double layer glass (with a wooden frame) window the east side of a building located in Piacenza has a surface of 14.4 m². In case there are no internal and external shading factors. Calculate the heating and cooling load of the corresponding to that window.

Calculate the heating and cooling load of the other windows which are fixed 14.4 m² on the west, fixed 3.6 m² on the south and an operable 3.6 m² on the south (the same window and frame type). How much does the total value change if I change the frame of the window from wooden one to aluminum?

## ANSWER

| (2)  |                        |                 |                               |           |      |             |      |                       |                       |               |      |             |                       |                      |      |

$$\Delta T_{cooling} = 31.9 - 24 = 7.9 \text{ }^{\circ}\text{C}$$

$$\Delta T_{heating} = 20 - (-4.8) = 24.8 \text{ }^{\circ}\text{C}$$

$$DR = 11.9 \text{ }^{\circ}\text{C}$$

## Heating Load:

$$q_{heating} = A \times HF = A \times U \times \Delta T_{heating}$$

We have  $\Delta T_{heating} = 24.8^\circ\text{C}$

|  | Aluminum   | 14.4                    | 3.61                   | 1289.2             |
| Fixed windows 14.4 m <sup>2</sup> on the West    | Wooden     | 14.4                    | 2.84                   | 1014.2             |
|  | Aluminum   | 14.4                    | 3.61                   | 1289.2             |
| Fixed windows 3.6 m <sup>2</sup> on the South    | Wooden     | 3.6                     | 2.84                   | 253.6              |
|  | Aluminum   | 3.6                     | 3.61                   | 322.3              |
| Operable windows 3.6 m <sup>2</sup> on the South | Wooden     | 3.6                     | 2.87                   | 256.2              |
|  | Aluminum   | 3.6                     | 4.62                   | 412.5              |

$$q_{total \text{ heating wooden frame}} = 1014.2 \times 2 + 253.6 + 256.2 = 2538.2W$$

$$q_{total \text{ heating aluminum frame}} = 1289.2 \times 2 + 322.3 + 412.5 = 3313.2W$$

## Cooling Load:

$$q_{cooling} = A \times CF$$

We have  $\Delta T_{cooling} = 7.9\text{ }^{\circ}\text{C}$ ;  $DR = 11.9\text{ }^{\circ}\text{C}$

$$\begin{aligned} CF &= U(\Delta T_{cooling} - 0.46 DR) + PXI \times SHGC \times IAC \times FF_s \\ &= U(7.9 - 0.46 \times 11.9) + T_x[E_d + (1 - F_{shd})E_D] \times SHGC \times IAC \times FF_s \\ &= U \times 2.426 + (E_d + E_D) \times SHGC \times 1 \times FF_s \end{aligned}$$
