WEEK 8 ASSIGNMENT

-BY PRATHYUSHA RAVICHANDRAN

QUESTION 1

Using the diagrams given in the presentation calculate how much (%) is the effect of applying different modifications (changing the gas, adding an extra pane, using a low emissivity coating) on the U value with respect to a benchmark case of double layer with air and no coating? (Keep the gap thickness to be 13 mm)

ANSWER:

With Double pane glazing (ε =0.84) & gap thickness 13mm

U- Value of a double pane glazing window if the gap is filled with air is 2.8 $\frac{w}{m^2k}$

| arepsilon value | 0 | .84 | | 0.10 | | | 0.84 | | | 0.1 | |

| change | | | | | | | | | | | |

QUESTION 2

Consider the house that we analysed in the last two examples, calculate the heating and cooling load of the other windows which are fixed 14.4 m² on the west, fixed 3.6 m² on the south and an operable 3.6 m² on the south (the same window and frame type). How much does the total value change if I change the frame of the window from wooden one to aluminium?

ANSWER:

Latitude ≈ 45

| $T_{cooling} = 24$ ° c | | | | | | | | | | Fr | ame | | | | |

$$q'_{south window} = A x (CF'_{south window(heat transfer)} + (CF'_{south window(irradiation)})$$

$$= 3.6 \text{ m}^2 \text{ x } (8.76 + 146.60) \frac{\text{w}}{\text{m}^2} = 559.30 \text{W}$$

Heating load

$$q'_{south window} = A \times HF'_{south window} = A \times U'_{south window} \times \Delta T_{heating}$$

= 3.6 m² x 3.61 $\frac{w}{m^2k}$ x 24.8 k = 322.30 W

OPERABLE WINDOW ON SOUTH SIDE

Area = 3.6 m^2

COOLING LOAD

 $q_{\text{south window}} = A \times CF_{\text{south window}}$

$$CF_{south window(heat transfer)} = U_{south window} (\Delta T_{cooling} - 0.46 DR)$$

$$U_{\text{south window}} = 2.87 \frac{\text{w}}{\text{m}^2\text{k}}$$

$$CF_{south\ window(heat\ transfer)} = 2.87 \frac{w}{m^2 k}$$
 (7.9 k - 0.46 (11.9 k)) $\approx 6.96 \frac{w}{m^2}$

Irradiation

 $E_D = 348$

 $E_d = 209$

$$PXI_{south window} = E_D + E_d = 348 + 209 = 557$$

Since no internal shading, so IAC = 1

SHGC = 0.46

$$FF_{s} = 0.47$$

$$CF_{south\ window(irradiation)} = PXI\ x\ SHGC\ x\ IAC\ x\ FF_s = 557\ x\ 0.46\ x\ 1\ x\ 0.47\ =\ 120.42$$

$$q_{\text{south window}} = \text{AxCF}_{\text{south window}} = \text{A(CF}_{\text{south window(heat transfer})} + (\text{CF}_{\text{south window(irradiation})})$$

$$= 3.6 \text{ m}^2 \text{ x (6.96 + 120.42)} \frac{\text{w}}{\text{m}^2} = 458.58 \text{ W}$$

HEATING LOAD

$$q_{\text{south window}} = A \times HF_{\text{south window}} = A \times U_{\text{south window}} \times \Delta T_{\text{heating}}$$

= 3.6 m² x 2.87 $\frac{w}{m^2 k}$ x 24.8 k = 256.23 W

If the frame is aluminium

$$U'_{south window} = 4.62 \frac{w}{m^2 k}$$

SHGC' = 0.55

Cooling load

$$\begin{split} \text{CF'}_{\text{south window(heat transfer)}} &= \text{U'}_{\text{south window}} \left(\Delta \text{T}_{\text{cooling}} - 0.46 \, \text{DR} \right) \\ &= 4.62 \frac{\text{w}}{\text{m}^2 \text{k}} \left(7.9 \text{K} - 0.46 \, \text{x} \, 11.9 \, \text{k} \, \right) = 11.21 \frac{\text{w}}{\text{m}^2} \\ \text{CF'}_{\text{west window(irradiation)}} &= \text{PXI x SHGC' x IAC x FF}_{\text{s}} = 557 \, \text{x} \, 0.55 \, \text{x} \, 1 \, \text{x} \, 0.47 = 143.98 \end{split}$$

$$q'_{west window} = A \times (CF'_{west window(heat transfer)} + (CF'_{west window(irradiation)})$$

= 3.6 m² x (11.21 +143.98)
$$\frac{\text{w}}{\text{m}^2}$$
 = 558.70 W

Heating load

$$q'_{south window} = A x HF'_{south window} = A x U'_{south window} x \Delta T_{heating}$$

= 3.6 m² x 4.62 $\frac{w}{m^2 k}$ x 24.8 k = 412.47 W
